

Science – Plants – 2023/24

Germination: When the conditions are right, the seed soaks up water and swells, and the tiny new plant bursts out of its shell. This is called germination.

Shoot: A shoot grows upwards from the seed or plant to find sunlight.

Seed dispersal: Seed dispersal is when the seeds move away from the parent plant. They can drop to the ground in the plant's fruit or be moved by the wind or animals

Sunlight: All plants need light from the sun to grow well. Some plants need lots of sunlight. Some plants only need a little sunlight.

Water: All plants need water to grow. Without water, seeds and bulbs will not germinate.

Temperature: is how warm or cold something or somewhere is. Some plants like cooler temperatures and some like warmer temperatures.

Nutrition: Food or nourishment. Plants make their own food in their leaves using sunlight.

- **Assessment:**
- To design and set up a test to find out what plants need to stay healthy.
- To look closely at the parts of a seed that will grow into a plant and explain how it will germinate.
- To describe the life cycle of a plant
- To explain what plants need to grow and stay healthy.
- To describe what happens if plants don't get all the things they need
- To explain how plants are suited to their habitats.
